SOFTWARE SECURITY

2002

# Cracking 2002

## Installation:

Insert Cracking 2002 CD-Rom into your CD-Rom drive in your computer. If you have Autorun enabled Cracking 2002 will automatically start running. If Autorun is not enabled click the Windows Start button on your Windows Taskbar and then select Run and type D:\START.EXE at the command prompt to run Cracking 2002. If your CD-ROM drive is a different letter just change D:\ to whatever letter your CD-ROM drive is.

## Requirements:

Cracking 2002 was designed for Windows 95/98/NT/2000. We recommend at least a 12x speed CD-Rom drive since all programs are viewed and run directly from the Cracking 2002 CD-Rom. The faster your CD-ROM drive the better performance you will get. Your display should be set at least at 800x600 with 16 Bit Color for best results. Internet Explorer 4.0 or greater is required to use some features in Cracking 2002.

## Terms:

This Cd-Rom is for Research Purposes only. The primary intent of this Cd-Rom is to provide the user with hard to find content for Research or Self Education relevant to computer programming and various protection methods and their intrinsic flaws by demonstrating reverse-engineering methods and techniques used to circumvent them. While possession of information or programs included on this Cd-Rom violates no laws, actually using or implementing some of the programs or content on this Cd-Rom may violate Federal Law. For this reason the user is instructed not to use any of the programs or content on this Cd-Rom which may violate any Laws or Infringe on the Copyright protection of others.
