

REALLY  
BIG  
NEWS

Now you can utilize Computer Supports IN-700 drive module in Altos Series 2000 systems along with the earlier drive sizes. The 700 megabyte drive is now supported as the second or third drive in systems that are currently equipped with 80, 170 or 380 megabyte drives as the root drive. As an option we can also provide support for the drive as the root drive providing a total formatted capacity of over 1.8 gigabytes.

Computer Support is also your source for the best implementation of the Exabyte 8200 tape drive. The 8200 provides single volume backup capability for this dramatically increased storage capacity.
